

Choose Your Desired Crop

WIDE

WIDE: A wide crop will still include full subject(s) and background elements.

CLOSE

CLOSE: A close crop eliminates some background and elements to tighten up the focus on the photo subjects.

TIGHT

CLOSE: A tight crop will eliminate most of the background and some of the subject(s) body to focus on subject(s) face and upper bodies.

Cropping To Fit Your Design

DESIGN EXAMPLE

In the case of a design calling for a vertically oriented photo, a photo will have to either used that has been taken in the vertical format (below) or the photo will have to be cropped to fit the vertical orientation (below left). A horizontally oriented photo (left) cannot be used to fill a vertical design area as seen in above design example.
